#1 Neurosurgeon: How to Manifest Anything You Want & Unlock the Unlimited Power of Your Mind

1/9

Dr. Jim Doty

She was a radiant being. 光芒四射! She had a

smile, a presence that made you feel safe. This is a

key, psychological safety, to down-regulate u stress response.

Just listening to somebody can profoundly

change their lives, because that's what people want

to be heard.

How sb. is interacting with u has nothing to do with

what's going on. It has to do with the baggage

they're carrying. 与...有关.

To respond with positive self-affirmation,

but also to not respond to those negative

feelings and just let them drift by.

☆ If you're hypercritical with yourself, you're hypercritical

in the lens through which you see the world, and

you're very judgmental.

listen is critical; respond with positive self-affirmation, not respond to those negative feelings.

If they don't have the tools to take care of their own pain, they can't help you.

Make a list of 10 things that u wanted.
"When u chase things like that, that's because of ur own insecurity."

All of us can shift from engagement of our sympathetic nervous system, which is part of our autonomic nervous system, which arises in the brainstem and is distributed throughout all the organs in your body, but especially ur heart, to the parasympathetic nervous system.

capitalist society → sympathetic ns
→ people get distracted from their purpose → "love mode".

When in "love mode", intention manifest are greatest. Use "need" narrative, I want to be a singer cause I want to motivate more people and myself.
"purpose" and "meaning" ⇒ activate ur physiology. Being connected, help others.
We're meant to live in our parasympathetic nervous system

Hermetic came up with "manifest" → based on neuroscience
"manifestation": is the ability to take an intention and embed it into your subconscious in a manner such that it has the greatest likelihood to occur.

• Every second we have about 6~10 million bits of information coming to us from our sensory organs.

But on a conscious level, we can only deal with 50~100 because 99.9% go to maintain our bodily function.

↳ you can choose and control by well.

"fires together, wires together."

⇒ create habits → results in the creation of neuro pathways → repetition lays down the circuitry → get embedded and actually makes things happen.

Use all of our sensory organs to embed negative thinking → activate "default mode network" (mind wanders, daydreaming...) it's self-referential → rumination

salience → "task positive network" { salience network
attention network
executive control network

That's just the way it is.

U have to not have excessive expectations at first.
Start small. (many of them comes from childhoods)
100% person have negative self-talk because of 'burden'.
it's unavoidable. Just not let it overpower you. Let them set there.

And → have compassion for self, you deserve it.

People's decision in their life are based on the baggage they carried.

I sit down, have some awareness of what created this.
"You can't push your shadow away. You have to accept it and integrate it into who you are."
simply be present, do breathing exercise, gets u into heart mode. List what have I already manifested.
sit there with love, saying: that happened.

Differ "What u want" / "What u need",

The world we create is one we create.
It is a delusion that we have created for ourselves.
